for safe travel*

Carlisle Road Reconstruction City of Inkster, MI

AEW was selected to perform professional engineering and surveying services for the total reconstruction of the Carlisle Road and related storm drainage facilities between Middle Belt and Inkster Roads.

To provide a successful design, AEW took into consideration the physical contours and soil properties of the location through the use of a topographical survey and utilized G2 Consulting Group for a soil study. Additional design decisions included pavement that would provide long-term durability and a cost effective approach for upgrading the existing storm sewers.

AEW worked in cooperation with MDOT's Taylor Transportation Service Center to offer the City of Inkster the most comprehensive construction engineering services possible. The project was completed on time with a final construction cost of \$2,265,000. Funding for the reconstruction was received from High Priority Project Funding (HPP) and a Local Jobs Today Grant.
