AEW receives award for engineering paving project

The Michigan Concrete Paving Association presented AEW with a 2008 Award of Excellence for the company's engineering of an important stretch of highway in St. Clair County.

Repairs to Fred Moore Highway in the City of St. Clair were completed on schedule with minimal disruption to traffic. The project began in September 2007 and finished just two months later.

Fred Moore Highway is the primary traffic route into the city and its vital business district and waterfront. Disruptions were kept to a minimum by maintaining one-way traffic in the construction area throughout the duration of the project.

AEW worked with Florence Cement Co. of Shelby Township, MI., on this full-depth repair of existing concrete pavement, including diamond grinding to re-establish a smooth-riding surface and joint resealing.
